

Chapter;-2nd: Constant's Variables and Data types

Previous Year Questions: (2022, 2021, 2020)

1. What is variable? Differences between global and local variable.
2. Describe the four basic data types used in C language. How could we extend the range of values they represent?
3. What is Symbolic constants? Write down the rules for declaring symbolic constant.
4. What do you understand by overflow and underflow of data ?
5. What is variable? How can you define and initialize a variable in C- program?
6. Describe with example the four basic data types used in a C- program.
7. What are the rules for declaring variables? Distinguish between local and global variable.
8. What are tokens in C. How do variables and symbolic name different?
9. Distinguish between local and global variables with example.
10. Distinguish between getchar() and scanf() functions.
11. Write down the algorithm to find out the area and perimeter of a rectangle.
12. Describe different types of token.
13. What is storage class? Describe different types of storage classes in C program.
14. Define token, keyword and constant with example.
15. Define operator. Describe the logical and relational operators used in C language

Previous year Questions: (2023)

16. What do you mean by variable? How can you declare and initialize a variable using C- programming.
17. Define symbolic constant. How does variable and symbolic constant different? Give example.
18. What are Keywords and identifiers? Define with proper examples.
19. Describe logical and relational operator's with example.
